

## Under Eye Cream

#SC-105

**Size:** 1 ounce

Under Eye Cream contains Emu Oil and Aloe Vera and can assist in visibly improving your skin's appearance without the oily or greasy result. White Stuff is also best used with our exclusive facial moisturizing cream, Peach Stuff. White Stuff and Peach Stuff form an excellent foundation for keeping the facial and under-eye area looking younger and more smooth with each use.

White Stuff's primary beneficial ingredients are Emu Oil and Aloe Vera. The power of Emu Oil and Aloe Vera, two ancient beauty secrets, combined with the latest discoveries in skin care, can help give your complexion a youthful glow. Our facial under-eye moisturizer, specially formulated for the fine skin under the eye, helps to reduce the appearance of wrinkles and fine lines.

**Product Ingredients:** Whole Leaf Aloe Vera Concentrate, Squalene, Petrolatum, Glycerin, Ceresin, Cetyl Dimethicone Copolyol, Octyl Palmitate, Emu Oil, Phenylephrine HCL, Alpha Bisabolol, Grapefruit Seed Extract, Fragrance

## Under Eye Cream

---

**Whole Leaf Aloe Vera Concentrate** - Aloe Vera is used externally to treat various skin conditions such as cuts, burns and eczema. It is commonly believed that sap from Aloe vera eases pain and reduces inflammation.

**Squalene** - A natural organic compound, which is often taken from shark liver oil. However, it also comes from plant sources such as rice bran, wheat germ and olives. Humans produce squalene in their bodies. Squalene is often used in cosmetics as an oil free and natural moisturizer. Squalene makes up 12% of sebum. Sebum is produced by our bodies to protect and waterproof hair and skin. It also keeps hair and skin from becoming cracked, dry or brittle. It discourages the growth of bacteria on skin.

**Petrolatum** - Used in medicinal ointments and for lubrication and used for cuts and burns because it promoted healing. It is colorless and has no taste or smell. It does not oxidize on exposure to the air and is insoluble in water.

**Glycerin** - A natural humectant, meaning it attracts moisture to your skin.

**Ceresin** - A white or yellow hard brittle wax made by purifying ozokerite and used as a substitute for beeswax.

**Cetyl Dimethicone Copolyol** - It is soluble in water and provides emollient in personal care products.

**Octyl Palmitate** - Derived from palm oil; used as an emollient and humectant.

**Emu Oil** - Used topically as a unique, 100% natural moisturizer. Emu oil reduces the visible signs of aging.

**Phenylephrine HCL** - Phenylephrine is used for the temporary relief of stuffy nose, sinus, and ear symptoms caused by the common cold, flu, allergies, or other breathing illnesses (e.g., sinusitis, bronchitis). This medication works by decreasing swelling in the nose and ears, thereby lessening discomfort and making it easier to breathe.

**Alpha Bisabolol** - Alpha Bisabolol is a myrrh-type gum resin with anti-irritant and anti-microbial properties. Natural alpha-bisabolol's anti-inflammatory, bactericidal and anti-mycotic properties supports its' use in the formulation of skin care and skin protection products, oral-care preparations (toothpastes and mouth rinses) and wound-care ointments. Natural alpha-bisabolol has good stability and compatibility with skin, unlike axulene or camomile oil.

**Grapefruit Seed Extract** - Contains high levels of vitamin C and E, and bioflavonoids. The important substances have an antioxidant action and can neutralize free radicals that damage cells and cause a number of illnesses
