Hair Healthy Shampoo

Whole Leaf Aloe Vera Concentrate - Aloe Vera is used externally to treat various skin conditions such as cuts, burns and eczema. It is commonly believed that sap from Aloe vera eases pain and reduces inflammation.

Purified Water

TEA-Lauryl Sulfate - A gentle and mild ingredient used for foaming and cleansing, It is derived naturally from coconut oil.

Lauramide DEA - A naturally derived cleansing agent used for conditioning, stabilizing foam and giving the shampoo the correct consistency. It is made from coconut oil, and produces a full and rich lather. It gives the shampoo a good base, along with thickness and richness.

Tea Tree Oil - Tea tree leaves have been used for centuries by the Australian Aborigines as an herbal remedy for healing cuts and infections. In addition Tea Tree Oil has been used effectively to: kill fungus; fight bacteria; inhibit the growth and reproduction of disease-causing microorganisms; promote healing; treat eczema, acne and problem skin; treat Dandruff; treat bug bites and minor wounds; treat skin infections naturally.

Emu Oil - Used topically as a unique, 100% natural moisturizer. Emu oil reduces the visible signs of aging.

Retinyl Palmitate (Vitamin A) - Vitamin A, also known as Retinol or Retinyl Palmitate, is known as the "skin vitamin". Vitamin A causes renewal of the cells. Vitamin A also speeds up the loss of dead skin cells to allow for younger and plumper skin cells. This process reduces the appearance of fine lines, wrinkles and irregular skin. The same process helps keep the scalp healthy and contributes to hair growth.

Tocopherol (Vitamin E) - Tocopherol, or vitamin E, is a fat-soluble vitamin that is an important antioxidant. Vitamin E is often used because it is commonly believed to play a role in encouraging skin healing and reducing scarring after injuries such as burns.

Allantoin - Allantoin is used to encourage the growth of healthy tissue, to aid the body in healing wounds and in fighting skin irritations. Allantoin promotes healthy skin and because of this it is often found in anti-acne products, sun care products and lotions that promote healthy skin.

Panthenol - Panthenol is a penetrating moisturizer, which absorbs into the skin and hair is converted into Pantothenic Acid, a B complex vitamin. Panthenol assists the skin and hair in retaining water (moisture) and also absorbs water from the air.

Sodium Hexametaphosphate - An alternative to chemical compounds, used to reduce the amount of soap and foaming agents needed for best results. It is a natural salt and increases quality and stability of the shampoo.

Diazolidinyl Urea - This ingredient is used as a safe and effective preservative.

Methylparaben - This ingredient is used to prohibit mold.

Fragrance, Blue 1, Yellow 5
